
Commodity Classification Begins Here®

Despite looking like so many generic internet search engines, 3CE is an expert system that has been specifically designed to automate the HS classification process. 3CE does not present long lists of mostly irrelevant "potential matches". Instead, 3CE streamlines the classification process by reading and understanding goods descriptions expressed in everyday commercial language, and delivers a single, correct HS code.

3CE is simple to use, requires no advance training, and delivers classification expertise to technicians and practitioners who need accurate answers immediately.

3CE interacts with users intuitively to address missing product details, and allows users to record transaction details and replay them as rules for subsequent queries. Included with the classification engine is comprehensive tariff and regulatory trade compliance data from 130 countries.

3CE is fully customizable according to clients' specifications, and can be easily integrated into any existing ERP or GTM platform.

"3CE is simply the best HS classification tool I have ever seen".

- Holm Kappler,
Former director, Tariff and Trade Directorate,
World Customs Organization.

3CE FEATURES:

- Allows users to describe their goods in everyday commercial terminology, including eponymous trade names, CAS numbers, and common acronyms,
- Takes into account product attributes, including weights and measures,
- Distinguishes between parts and wholes,
- Interacts intuitively and intelligently with users to resolve exceptions,
- Applies HS General Rules of Interpretation and HS Section and Chapter Notes, and
- Automatically saves transaction details and classification rationale as a Customs-ready audit trail.
