

3CE Integrated Solutions. Eliminate silos.

Departmental and related data silos are seen as a growing pain for most organizations involved in cross-border trade. 3CE addresses this issue by offering fully-integrated access to our classification and verification tools, and tariff and regulatory trade compliance data.

3CE supports any existing workflow or business process and can be easily and seamlessly integrated into any ERP or GTM system. This translates into enormous cost savings through the elimination of duplication, and the ability to classify products and parts when they are created. 3CE integration further ensures compliance and eliminates risk by enabling automatic real-time verification of HS codes, so that any changes to regulatory trade data are flagged and addressed before they reach the border. Finally, 3CE integration facilitates the collection and storage of supporting data that Customs authorities require – resulting in the elimination of a common logistics process bottleneck.

“An enormous amount of information and knowledge resides in the minds of key people, but this material is rarely organized in a fashion that allows for its transmission to others.”

- W.W. Powell

3CE SEAMLESS INTEGRATION:

3CE compliance and global trade management tools and data are available through both web service API's (REST) and customizable web based user interfaces.
